

**Rotting Banana,
Anyone?**

* Just like Porter, your room can have rotting bananas too!

- Get three fresh bananas.
- Place one banana indoors near a window with the sun shining on it.
- Place the second banana next to it in a well-sealed sandwich bag.
- Place the third banana outside.

Watch the bananas over the course of 1 week to see which rots fastest. If the banana outside disappears, where do you think it went?

GOAL: Learn about the process of biodegrading and food safety.
